The slow work of safety

This month, US regulator OSHA announced it would be delaying the implementation of a nationwide crane operator certification requirement until 2017. Many US crane owners, who’ve already got their operators certified in anticipation of a 2014 deadline, will be frustrated by this. But the extra time will ensure the country ends up with effective regulation that enhances safety, without imposing excessive costs.

The development of operator certification in the US is a good example of the long term work that is needed to deliver good regulation. It stands in stark contrast to the mistakes made when regulators act in response to individual incidents.

An operator certification programme was first proposed by US crane owners group the SC&RA in 1987. The proposal gained impetus two years later after an accident in San Francisco killed five people. In 1992, OSHA proposed a national licensing scheme for operators. The SC&RA acted to develop a workable certification scheme, launching the NCCCO in 1995. NCCCO worked with major contractors to get their programme accepted on the biggest job sites, and with accreditation agencies to get a stamp of approval for the certification process. OSHA itself even formally recognised the programme.

That led, in 2002, to the first moves towards a revision of the entire federal cranes and derricks rule. A committee of experts, CDAC, was formed for a negotiated rulemaking. The current delay has its roots in this revision. In their proposal for a certification requirement, CDAC made mention of type and capacity. The reasoning was that, at the time of discussions, the 17.5USt point marked a boundary between fixed and slewing cab cranes. CDAC had no intention of a general requirement for capacity testing. However, OSHA’s interpretation was that operators should only be certified to run cranes up to the capacity they had been tested on.

The problem was that, by the time OSHA made its interpretation, the US industry had largely been certifying operators by crane type only, without a reference to capacity. With a 2014 deadline looming, the majority of operators had already been certified. Even those schemes that test to capacity only do so to bends.

OSHA’s interpretation provoked a storm of criticism: crane owners and operators unions declared it unworkable, and one estimate put the cost at a billion dollars. OSHA also said it would treat certification as equivalent to qualification: rather than a test being a minimum indication an operator could do the job, with their employer responsible for training them on individual cranes, the card would be the only measure that mattered.

By taking a step back, and indicating it will consider a new rulemaking, OSHA has shown it listens to the industries it works with. OSHA now needs to act to formulate a new rulemaking, without further delay.

Cranes Today China
Produced in partnership with Chinese construction equipment magazine CMTM, Cranes Today China includes the best articles from our international edition, collected and translated for thousands of readers in China, Cranes Today China is distributed every three months.

Buyer’s Guide
The Cranes Today Buyer’s Guide provides buyers with a huge variety of suppliers of cranes and crane equipment. We separate crane and equipment suppliers, and offer full contact details plus a list of associations. As well as a hard copy for on-the-spot reference, the guide is available online at www.cranes-directory.co.uk

CranesTodayMagazine.com
Cranes Today’s website gives you daily access to breaking industry news, as well as all our print articles. It’s also your doorway to the digital edition of Cranes Today, allowing you to access our full issues as soon as they are published. Our archives give you access to Cranes Today stories stretching back over 15 years.

Hoist and OCH
Cranes Today’s sister titles Hoist and OCH focus on the factory crane sector. Hoist reaches readers around the world, while OCH is targeted at crane users and distributors in North America. Both magazines have an online presence, at www.OCHMagazine.com and www.HoistMagazine.com

Conferences
Cranes Today has a well-established reputation for organising conferences for the lifting industry. In recent years, our regional conferences Middle East Cranes and Cranes Asia have brought together local crane users in markets previously under-served by lifting events, and helped promote improved crane safety. This year, Cranes Today returns to London, home to its popular Crane Safety series of events, with Cranes UK 2013.

Email newsletter
Delivered every Wednesday to 6,500 readers around the world, Cranes Today’s email newsletter brings readers a quick summary of the latest breaking news from around the industry.
